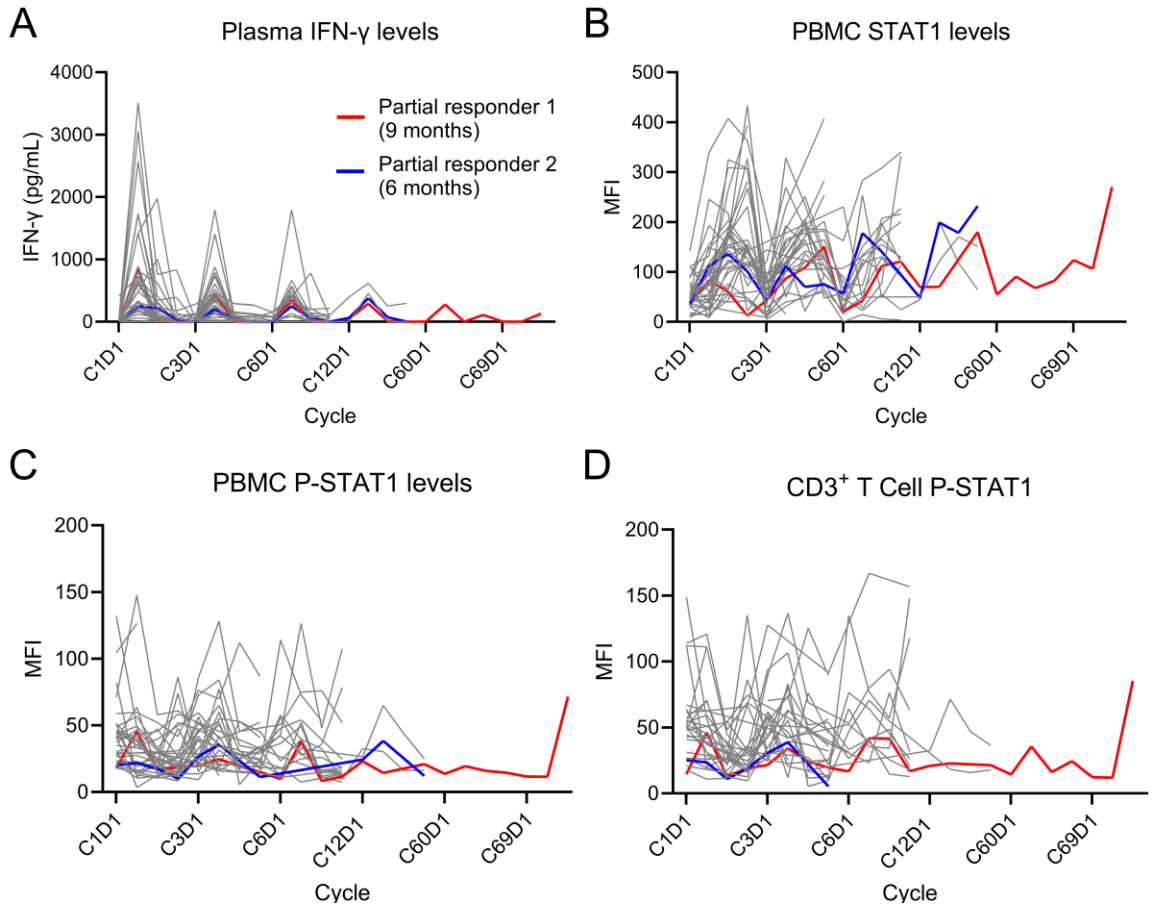

Figure S1.

Cytokine expression in partial responders. Levels of IFN-γ, STAT1, and P-STAT1 were compared between partial responders and non-responders. The longest partial responder (9 months) is highlighted in red, the other partial responder (6 months) in blue. All other study participants are marked in gray. Cycles for which data points are not present represent loss of the participant from the study or sample unavailability. X-axis represents day in each cycle. Y-axis represents pg/ml (A) and mean fluorescence intensity (MFI) (B, C, D). c, cycle.
